Smith DJ, Taubman MA; WPI; 2003-845091/78. Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein. Claim 11; Page 10; 49pp; English. The present sequence is that of a peptide comprising amino acid residues 33-52 of the glucan binding protein-B (GbpB) of Streptococcus mutans strain SM23 ADD9349; The peptide binds to a major histocompatibility complex (MHC) class II protein. It was identified as a potential B cell epitope using a matrix-based algorithm for epitope prediction, which was complex (MHC) class II protein. It was identified as a potential B cell epitope using a matrix-based algorithm for epitope prediction, which was used to search the primary amino acid sequence of GbpB for known MHC class II binding motifs. The peptide can be used in immunogenic compositions and subunit vaccines for dental caries. These comprise MHC class II protein-binding GbpB peptides covalently linked with peptide class II protein-binding GbpB peptides covalently linked with peptide subunits (preferably from the catalytic domain) of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Diepitopic or multiepitopic polypeptides can be

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MRIC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB-derived peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gabs
                                                                                                        Gaps
prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in passive immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ;

class II protein binding GDDB peptides, especially HLA-binding peptides, covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Dispitopic or multi-epitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GDpB can be used in
                                                                                                                                                                                                                                                                                                                                                                                                      Glucan binding protein-B; GbpB; vaccine; anticaries; epitope; immunogen.

                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                             protein B (GppB) of Streptococcus mutans strain SK32. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The includes a number of human leucocyte antigen (HLA)-binding epitopes. The invention provides immunogenic compositions and vaccines for dental caries. The compositions comprise major human vaccines for dental caries. The compositions comprise major human specially HLA-binding peptides, covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Diepitopic or multiepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in
                                     Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.

protein-B (GbpB) of Streptococcus mutans strain SSM3. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The invention provides immunogenic compositions and vaccines for dental caries. The compositions comprise major histocompatiblity complex (MHC) class II protein-binding GbpB peptides, especially HLA-binding peptides, covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Diepitopic or multiepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in
                                                                                                                Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.
                                                                                                                                                                                                                                                                                                                                                                            The present sequence is the protein sequence of the glucan binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Length 431;

The present sequence is the protein sequence of the glucan binding protein-B (GappB) of Streptococcus mutans strain 3VF4. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The invention provides immunogenic compositions and vaccines for dental

Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.

The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MRIC) class II protein. The composition is useful for producing an antibody for immunizing mammala against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  immunogenicity, immune stimulation; glucan binding protein-B;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

The present invention relates to a computational method (M1) for identifying adhesin and adhesin-like proteins, by computing the sequence-based attributes of protein sequences using five attribute modules of a neural network software, training an artificial neural network (ANN) for each of the computed five attributes, and identifying the adhesin and adhesin having probability of being an adhesin (Pad) as equal or greater than 0.51. Also claimed is a set of 274 annotated genes encoding adhesin and adhesin-like proteins, having 274 fully defined 162-ccc lists base pair (SEQ ID NO: 385-658) sequences; a set of 105 hypothetical genes encoding adhesin and adhesin-like proteins, having 105 fully defined 306-18876 base pairs (SEQ ID NO: 629-763); a set of 105 hypothetical adhesin-like proteins, having 105 fully defined 53-3716 base pair (SEQ ID NO: 1-279); a set of 105 hypothetical adhesin and adhesin-like proteins, having 105 fully defined 106-5291 base pair (SEQ ID NO: 1-279); a set of 105 hypothetical adhesin and adhesin-like proteins, having 105 fully defined 106-5291 base pair (SEQ ID NO: 280-384) sequences; and a fully connected multilayer feed forward ANN (I) based pair (SEQ ID NO: 1-279); a set of 105 hypothetical adhesin and adhesin-like proteins, of therapeutic potential. And identifying and short-listing proteins for further testing in development of new vaccine formulations consecuted adhesins and adhesins from discovery and preventing therapeutics for whooping cough, pneumonia, cuseful for identifying putative adhesins at hat are important in drug distantly related organisms, and from bacteria belonging to a wide consecution of the proteins. (M1) is capable of predicting adhesive nature of phylogenetic spectrum. (M1) is capable of predicting adhesive nature of cultique proteins. The present sequence is a microbial pathogen adhesin
 Computational method for identifying adhesin and adhesin like molecules, comprises computing sequence-based attributes of protein sequences using neural network software and training an artificial neural network.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Glucan binding protein-B; GbpB; vaccine; anticaries; epitope; immunogen.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  algorithm; adhesin; pharmaceutical; vaccine; drug screening; bordecella pertuesis infection; antibacterial; preumonia; antiinflammatory; respiratory-gen.; gastric ulcer; antiulcer; gastrointestinal-gen.; urinary tract infection; antimicrobial; uropathic.
                                                                                                                                                                                                                                                                           New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing

The present sequence is the protein sequence of the glucan binding protein-B (GbpB) of Streptococcus mutans strain 15JP2. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The invention provides immunogenic compositions and vaccines for dental caries. The compositions comprise major histocompatiblity complex (MHC) class II protein-binding GbpB peptides, especially HLA-binding peptides, covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Dispitopic or multispitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in
       Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex
                                                                                                                                                                                                                                                                                                                                 1 QIASQDSKINNLTAQQQAAQ 20

The present sequence is the protein sequence of the glucan binding protein-B (GbpB) of Streptococcus mutans strain 3SN1. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The invention provides immunogenic compositions and vaccines for dental caries. The compositions comprise major histocompatibility complex (MHC) class II protein-binding GbpB peptides, especially HLA-binding peptides,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.
                                                                                                                                                                                                                                                                                                                                            Glucan binding protein-B; GbpB; vaccine; anticaries; epitope; immunogen.
                                                                                                                                                                                                                                                     Streptococcus mutans glucan binding protein-B.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MtG) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing
covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Dispitopic or multipeptopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

The present sequence is that of a peptide comprising amino acid residues 37-56 of the glucan binding protein-B (GbpB) of Straptococcus mutans stray AbD93649. The peptide binds to a major histocompatibility complex (WHC) class II protein. It was identified as a potential B cell epitope using a matrix-based algorithm for epitope prediction, which was used to search the primary amino acid sequence of GapB for known MHC class II binding motifs. The peptide can be used in immunogenic compositions and subunit vaccines for dental caries. These comprise MHC class II protein-binding GbpB peptides covalently linked with peptide cubunits (preferably from the catalytic domain) of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Diepitopic or multiepitopic polypeptides can be related against MHC class II binding fragments of GbpB can be used in caised against MHC class II binding fragments of GbpB can be used in
                                                                                                                                                                                                                                                                                                                                                                                                                           Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New composition comprising a fragment of a glucan binding protein-B (GDBB) that binds to MRC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammala against dental caries. This sequence corresponds to a Streptococcus mutans GbpB-derived peptide of the invention.
                                                                                                                                                                                                                                                                                         New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

GENERAL INFORMATION:
APPLICANT: Lynn A Doucette-Stamm and David Bush
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
ENTEROCOCCUS FARCIUM FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Length 525;
                                                                                                                                                                     Length 523
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Indels

US-11-074-176-136

Sequence 136, Application US/11074176

Publication No. US20060250135A1

GENERAL INFORMATION:
APPLICANT: Klasenlammer, Todd R.
APPLICANT: Russell, William M.
APPLICANT: Russell, William M.
APPLICANT: Altermann, Eric
APPLICANT: Peril, Adrea Azcarate
TITLE OF INVENTION: Nucleic Acid Sequences Encoding
TITLE OF INVENTION: Stress-Related Proteins and Uses Therefore
FILE REPERRORE: 5051-694
CURRENT PILING DATE: 2005-03-07

PRIOR APPLICATION NUMBER: US/11/074,176

CURRENT FILING DATE: 2004-03-08

NUMBER OF SEQ ID NOS: 381

SOFTWARE: FastSEQ for Windows Version 4.0

ALIGNMENTS

Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein. Glucan binding protein-B; GbpB; vaccine; anticaries; epitope; immunogen. Streptococcus mutans glucan binding protein-B peptide fragment ADD93627 standard; peptide; 20 AA. 07-MAR-2002; 2002US-0363209P. 07-MAR-2003; 2003WO-US006962. (first entry) Taubman MA; Streptococcus mutans. (FORS-) FORSYTH INST. WPI; 2003-845091/78. WO2003075845-A2 18-SEP-2003. Smith DJ,

Claim 11; Page 10; 49pp; English.

The present sequence is that of a peptide comprising amino acid residues 37-56 of the glucan binding protein-B (GbpB) of Streptococcus mutans strain SK13 ADD9549. The peptide binds to a major histocompatibility complex (MHC) class II protein. It was identified as a potential B cell epitope using a matrix-based algorithm for epitope prediction, which was used to search the primary amino acid sequence of GbpB for known MHC class II binding motifs. The peptide can be used in immunogenic compositions and subunit vaccines for dental caries. These comprise MHC class II protein-binding GbpB peptides covalently linked with peptide subunits (preferably from the catalytic domain) of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Diepitopic or multiepitopic polypeptides can be

                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatiblity complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB-derived peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MfC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in passive immunisation.

                                                                                                                                                                                                                                                     ö
                                                                                          The present sequence is the protein sequence of the glucan binding protein—B (GDpB) of Streptococcus mutans strain SK32. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The invention provides immunogenic compositions and vaccines for dental caries. The compositions comprise major histocompatibility complex (WHC) class II protein-binding Gbp speptides, especially HLA-binding peptides, cowpositions are used in a claimed method of eliciting production of an antibody in a mammal. Dispitopic or multipelicipic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in
                             Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Composition useful as vaccines for dental caries comprises a fragmeht of a glucan binding protein-B binding to a major histocompatibility complex class II protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is the protein sequence of the glucan binding protein-B (GDpB) of Streptococcus mutans strain 3VF4. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The invention provides immunogenic compositions and vaccines for dental caries. The compositions comprise major histocompatibity complex (MHC) class II protein-binding GbpB peptides, especially HLA-binding peptides, covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Dispitopic or multipitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Autibodies raised against MHC class II binding fragments of GbpB can be used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      gment of complex
caries. The compositions comprise major histocompatibility complex (MHC) class II protein-binding GBpB peptides, especially HLA-binding peptides, covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Dispitopic or multipeptopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in

The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible nicroparticle, useful for producing an antibody (claimed) for immunizing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   immunogenicity; immune stimulation; glucan binding protein-B;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  glucan
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a composition comprising a fragment of a gluca binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gape

The present invention relates to a computational method (M1) for identifying adhesin and adhesin-like proteins, by computing the sequence-based attributes of protein sequences using five attribute modules of a neural network software, training an artificial neural network (MNN) for each of the computed five attributes, and identifying the adhesin and adhesin-like proteins having probability of being an adhesin and adhesin-like proteins, having 274 annotated genes encoding adhesin and adhesin-like proteins, having 274 fully defined 162-1151 base pair (SEQ ID NO: 385-659) sequences; a set of 105 hypothetical adhesin and adhesin-like proteins, having 279 fully defined 162-1151 base pair (SEQ ID NO: 1279); a set of 105 hypothetical adhesin and adhesin-like proteins, having 279 fully defined 53-3716 base pair (SEQ ID NO: 1-279); a set of 105 hypothetical adhesin and adhesin-like proteins, having 279 fully defined 165-529 base pairs (SEQ ID NO: 12-39); a set of 105 hypothetical adhesin and adhesin-like proteins, having 105 fully defined 106-5291 base pair (SEQ ID NO: 280-384) sequences; and a fully connected multilayer feed forward ANN (I) based on (M1). (M1) is useful for identifying adhesin and adhesin-like proteins of therapeutic potential, and identifying and short-listing proteins for further testing in development of new vaccine formulations to eliminate diseases caused by various pathogenic organisms. (M1) is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 useful for identifying putative adhesins that are important in drug discovery and preventing therapeutics for whooping cough, pneumonia, gastric ulcer and urinary tract infections. (M1) identifies adhesins from distantly related organisms, and from bacteria belonging to a wide phylogenetic spectrum. (M1) is capable of predicting adhesive nature of unique proteins. The present sequence is a microbial pathogen adhesin
Computational method for identifying adhesin and adhesin like molecules, comprises computing sequence-based attributes of protein sequences using neural network software and training an artificial neural network.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Glucan binding protein-B; GbpB; vaccine; anticaries; epitope; immunogen.

                                                                                                                                                                                                                                                                                                                                                                        New composition comprising a fragment of a glucan binding protein-B (GpB) that binds to MfC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ramachandran S;
